

Whenever and wherever you need to print

### Consider the benefits of an on-demand, color wristband system –

The SafeAlert Color wristband provides a secure, simple way to alert healthcare staff about the patient's health status in a way that protects the patient's privacy.

Epson SecurColor™ Printer

There's so much information we'd like to print on a wristband. How can we do so?

Your facility can set the system to follow your defined Alert Color Code system. For example,

- **Red** symbol or letter—Allergy.

This is particularly effective if you have patients with multiple allergies as the red color will alert staff that the patient has an allergy and they will then have to review the patient's charts to determine which allergies are noted. It's less likely an allergy will be overlooked or misread.

- **Purple** – Do Not Resuscitate
- **Yellow** – Patient at Risk for Falls
- **Pink** – Restricted Extremity (a warning to care providers to take extra care to the limb)
- **Blue** – Advance Directive

## What else can we print on the wristband?

Bar coded identification bands are placed on all patients who are admitted. The facility can print what is needed on the wristband before placing it on the patients.

### Information often includes:

- Facility name, phone number, logo
- Patient hospital identification number (visit ID)
- Location within hospital
- Alerts as mentioned above
- Optional patient pictures

## SafeAlert Wristband System – Printer, software, supplies and support

The SafeAlert Wristband Identification System includes an extremely durable and value priced SecurColor color ink jet printer that only requires ONE cartridge. You don't need to place and replace different color cartridges or keep them stocked on a shelf. And the SecurColor's small size makes it easy to use in tight, crowded spaces or when portability is required. We offer both adult and pediatric size ID wristbands that include an easy-to-use secure adhesive closure that is tamper proof.

Facilities can print either 1 or 2-D bar codes depending upon your requirements.
