

HemaTrax[®] Standalone

the Perfect Safeguard for Emergencies

Are your blood facilities prepared to maintain operations in the event of a cyber attack or natural disaster? Cyber attacks are increasingly common and, as you know, can be significantly damaging to any part of a hospital's network.

You can feel confident that your clients will continue to be ISBT 128 compliant in the event of such occurrences. HemaTrax[®] is a complete system that clients can use as a backup to print blood labels so there is no downtime.

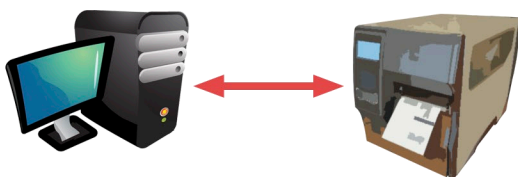

The system includes configurable password protection to maintain internal security as well as comprehensive reports available to meet any audit requirements.

Our HemaTrax standalone software works on its own, without the need to integrate into your Blood Establishment Computer System (BECS) and is a perfect back up solution in case of emergencies.

With the purchase of HemaTrax standalone, users get access to a comprehensive technical support and service team that will keep the system up to date and fully functional.

HemaTrax is the industry leading labeling software and uses a Zebra desktop or tabletop printer. All users can be assured that our labels are FDA compliant and meet all ICCBBA Consensus standards. Clients can print all required labels – 4 x 4 face labels, product labels and more. This premier product is installed in thousands of blood banks and transfusion services worldwide.
