

REPLITRAX™

Bar code replication system

System overview

Use economic blank labels and just print what you need when you need it with our simple, cost effective RepliTrax™ system. You don't need a PC or software, just our all-in-one complete printer. A great way to eliminate expensive pre-printed labels.

This easy to use point and print system can replicate all types of barcode symbologies. Print an individual barcode or use the system to print the next sequence number.

Print DIN labels

When printing DIN labels, place them directly on the unit bags or attach the labels to a tag.

Print individual DIN labels for your paperwork, rather than handwriting the donation number. Just scan and print as many times as you need. You'll no longer have to worry about transposing numbers.

No need for costly label sets as you only print what you need.

DIN-1875-CG-ROLL printed sample

Leukoreduction

Scan and print low-cost blank labels for satellite blood bags. **Easy as 1-2-3:**

Digi-Trax® labels adhere and remain legible when exposed to freezing, waterbath, repeated abrasion and disinfecting. Our adhesives meet CFR 21, Sec. 175.105 and have been tested negative for bag leaching.

A perfect labeling solution for:

- Microscope slides
- Test tubes
- Donation Identification Numbers (DINs)
- Transfusion verification ID bands
