

DINselect™

A comprehensive program that provides DIN labels tailored to your facility

DINselect™ consists of two ways of producing your donation identification labels — we can provide you with labels printed with your required bar code sequence— “pre-print”— or you can print labels at your facility— “on-demand.” You can even use a combination of both options. We know every facility is different— different procedures, different workflows, different label designs. **That's why our flexible DINselect™ program is based on what you need.**

DINselect™

DINselect™

DINselect™ options:

Pre-Printed DIN Labels

Digi-Trax® provides the most flexible options for your bar coded Donation Identification Numbers (DIN) label sets. Regardless if you're a small hospital blood center and need a few hundred sets or a part of a massive regional blood center in need of thousands, we print your labels using the right technology for your facility. We offer both thermal transfer and digitally printed labels. Our print and verification systems are proven to meet your needs.

Rest assured, your facility will receive easy to read and scannable DIN sets—every time. During our production processes, every bar code is scanned and verified to ensure sequence integrity as well as to eliminate duplicate labels. Our sophisticated verification system ensures your labels are produced with 100% accuracy.

In addition to our print technology options, Digi-Trax uses the most durable, high quality label and adhesive combinations for high density bar codes. All of our DIN label materials are FDA approved and designed to meet the most stringent requirements of any blood labeling environment.

RepliTrax™

Just need a few additional labels from one set? Take a look at our RepliTrax™ system. Use economic blank labels and just print what you need when you need it with our simple, cost effective RepliTrax™ system. You don't need a PC or software, just our all-in-one complete desktop printer and a scanner. Scan your original DIN label and create the same compliant ISBT 128 barcode in the label format you need for blood bags and/or test tubes. A great, cost-effective way to bridge the gap.

labeling with
DINselect™**

On Demand DINselect™-SA

This standalone software is a simple effective way to print your own DIN labels. You'll reduce operating costs tremendously, get 100% scannable bar codes, put an end to year-end ordering anxiety and the software will even provide compliance records.

Integrated with your BECS software— currently with BBCS

Digi-Trax has partnered with BBCS to streamline the entire DIN process so that your labels are printed on demand DIRECTLY from ABO Wheels, a module of BBCS. If you use BBCS, your DIN labels will be printed by your trusted 510(k) cleared software using an efficient on-demand operation. Digi-Trax® will continue to develop this technology with additional blood establishment computer systems so that printing DIN labels at the facility becomes mainstream. It's a safe, very cost-effective way to streamline your operation.
